

Out Of Space

By Freddie Charlton Clarke

In 2024 february 6th A group of spacemen went to go investigate the other side of Jupiter because they had already discovered the Moon, Mars, Saturn and half of Jupiter.

There where 21 ~~men~~ men on the spaceship, wait they were mainly searching for new, unique life forms. As they the first group ~~to~~ touched this barrier which was not made for the human eyes to see the small rocket was blasted 2 miles away and blew up along with an other rocket. The big rocket was back on the moon and that one could hold 21 ~~one~~ but they all went on a small rocket that could hold four to five men in each. They lost 8 men and 13 was left they all got back to the rocket and they where about to go back to Earth. When everything in the solar system was no longer there. The solar system in Dimension B311 was Tragically gone.
